

# CRED Assignment

Build a swipe gesture like on cards screen in CRED app.

## Requirement:

1. User should be able to swipe in both directions
2. After swiping, there should be some actionable's (e.g in CRED app “pay now”, “view details”)
3. On clicking any action, just display a toast uniquely identifying that action
4. No of Actionable's should be dynamic (assume 0-3)
5. Only one card should in swiped state at a time
6. On Vertical scroll the cards should be reset to default state (non-swiped)

## Note:

The outer card need not be a Credit card.

Focus should be more on the swipe interaction and overall user experience

## Brownie points:

Automatically do swipe and back one time when the screen loads to give a hint to user about this gesture
